

## BULLA ACHATINA.

### CHARACTER GENERICUS.

*Animal* Limax.

*Testa* univalvis, convoluta, inermis.

*Apertura* subcoarctata, oblonga, longitudinalis,  
basi integerrima.

*Columella* obliqua, lævis.

*Lin. Syst. Nat.* p. 1181.

### CHARACTER SPECIFICUS, &c.

BULLA testa ovata, apertura obovata apiceque  
fanguineis, columella truncata.

*Lin. Syst. Nat.* p. 1186.

BULLA GALLICA.

*Seb. Mus.* 3. t. 71. 1. 2. 3. & 7. 8.

BUCCINUM cauda brevi, ore expanso.

*Argenv.* t. 10. f. E.

---

Perpulchram hanc concham parit America, et  
Americæ adjacentes insulæ. Variat colore, qui in-  
terdum fuscus, undis obscurioribus, interdum multo  
splendore insignis quem cernere est in tabula. Spe-  
cies

cies hæc terrestris? est et tenuis. Distinguitur varietas depicta apertura læte purpurea. Quod eam incolit animal limaci simillimum est. Non omnino persuasum mihi habeo debere hanc testam generi quod *Bullam* vocat Linnæus annumerari, cujus inter formam generalem et characteres huic non plene convenit.

THE  
AGATE BULLA.

GENERIC CHARACTER.

*Animal* resembling a Limax or Slug.

*Shell* univalve, convoluted.

*Aperture* somewhat straitened, oblong, longitudinal, entire at the base.

*Column* oblique and smooth.

SPECIFIC CHARACTER, &c.

Ovate, pointed, wide-mouthed BULLA, with broad fasciæ, crimson mouth, and truncated column.

The AGATE BULLA.

The CRIMSON-MOUTHED BULLA.

---

This most elegant shell is a native of America and the West Indian islands. It varies considerably in point of color, being sometimes of a dusky brown, with deeper variegations; at other times ornamented with the beautiful hues represented on the annexed plate. This is commonly called the purple-mouthed variety.

variety. It is a land? shell, of a thin structure, and the inhabiting animal bears the most striking resemblance to the common snail. It may be added that it seems scarce allowable to rank this shell under the Linnæan genus *Bulla*, with the general form and characters of which it does not perfectly agree.
